### Case Study - SAP (Project Readiness Program)

#### Stage I

The trainees were selected from all the college campuses in Karnataka & Maharashtra. Batch formation was done jointly by the Talent Transformation team in consultation with the respective delivery & project team. Scheduling of all the batches Vs trainers was done as per training dates.

#### Stage II

SAP - PRP was organized for rookies (campus recruits). The course outline was discussed and finalized with SAP Practice and Talent Transformation team.

All the trainees went through a 22 days schedule on ABAP programming.

#### Stage III

After successful completion of 22 days program, the trainee's performance was measured by an online test. 80% marks was the benchmark to clear the technical assessment. Approx. 85% trainees cleared the test and were shortlisted for the next level of training. Remaining 15% went for a 4 days refresher program and then successfully joined the next level of training.

#### Stage IV

The SAP - level II batches (Technical & Functional) were formed based on the performance in level I evaluations. The level II training comprised of the following:

- Advance ABAP, BASIS, FICO, PP

The Level II training varied in duration (15 - 22 days), based on each module. This also included a 3 days exhaustive project work, followed by project review & presentations, evaluated by SAP Practice managers.

The training program was concluded by a final test, followed by deployment of the trainees to their respective project teams.
